EUROPA

TYPE:
MOON

SATELLITE OF:
JUPITER

DIAMETER:
3,100 KM

ATMOSPHERE:
MOSTLY OXYGEN

TEMPERATURE:
-160 °C

CHANCE OF LIFE:
POSSIBLE

ASTROPOD™ is an international corporation striving to explore our solar system. This time, they have landed on a moon of Jupiter called EUROPA.

EUROPA was discovered by Galileo in 1610, researched by mankind in 2024, now explored by you.

A composite image featuring an astronaut in a white spacesuit floating in space on the left. In the center is a large, dark, textured sphere resembling a rock or planet. On the right is a close-up of an astronaut's helmeted face, looking forward. The background is a dark blue space with some faint light effects.

MISSION: ROCK DISCOVERY

We found a mysterious rock deep inside a cave on EUROPA. Our exoskeleton robots brought the rock back to our research station. The rock... It feels like it is trying to **speak with us...**

Your mission is to break it open and uncover its secrets.

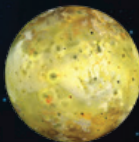

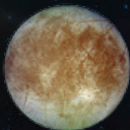

OBJECTIVE:

- 1) Break down the mysterious rock to discover secrets.
- 2) Assemble and scan the alien cube with lights.
- 3) Solve 6 different messages left by alien life.

JUPITER

EUROPA

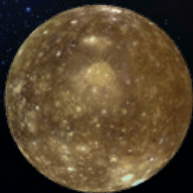

IO

GANYMEDE

CALLISTO

DID YOU KNOW?

EUROPA is the 4th largest moons of Jupiter. The largest moon is **Ganymede**, followed by **Callisto**, then **Io**. Jupiter has a total of 80 moons!

HOW TO DISCOVER

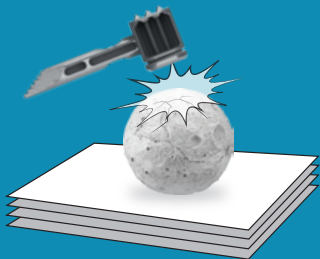

Tools x 2

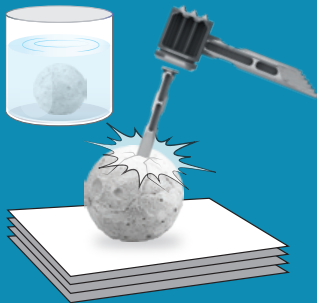

Rock

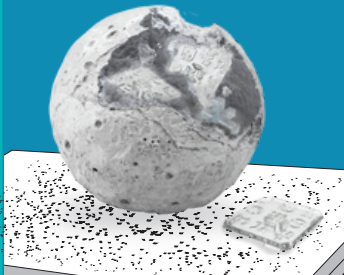

- 1** Set up your work area: Spread a few layers of newspaper on a tabletop.

- 2** Optional: Place the block in a cup of water for a few minutes to soften it for easier digging.

- 3** Dig your way to the Alien parts inside by using the chisel to scrape away at the plaster.

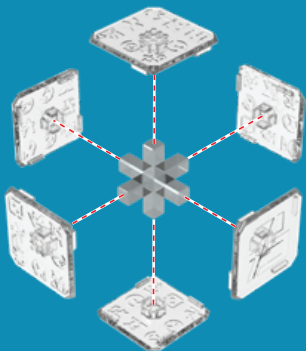

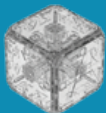

- 4** Completely remove last plaster bits by holding it under running water and rinse well.
